Simply Better Connections

Our Vision

"Simply Better Connections" has always been at the heart of the ATEN brand. It means providing innovative solutions for you to make better connections, efficiently and seamlessly, to the information and people that you value. As a result, ATEN connects you to the world, anytime and anywhere, by providing technologies that enable you to share and to care. ATEN makes professional and personal life easier and better connected.

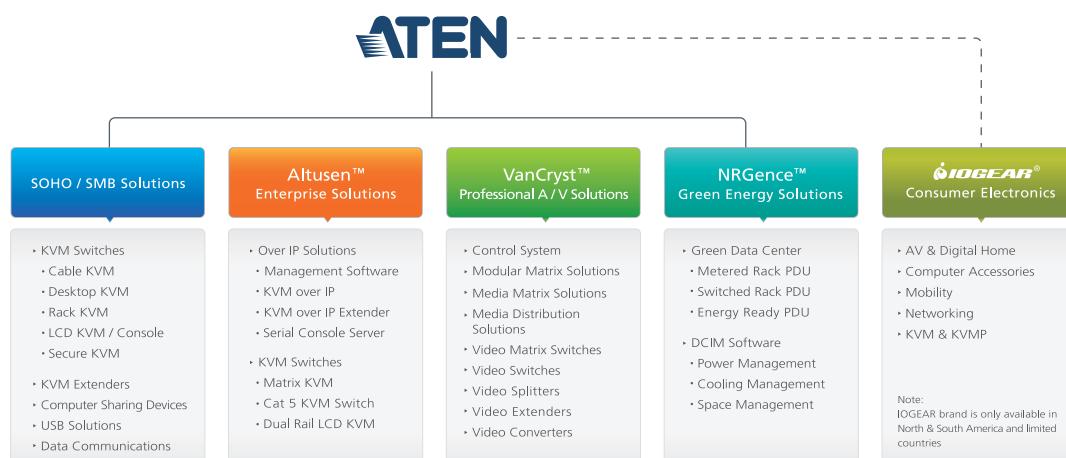

About ATEN

ATEN International Co., Ltd., established in 1979, specializes in IT connectivity and management solutions that are uniquely positioned at the convergence of KVM and Pro A/V.

ATEN's Altusen™ IT infrastructure access and management solutions offer integrated KVM connectivity and control capabilities for Enterprise customers that facilitate the effective management of IT infrastructures from anywhere in the world. Our ATEN VanCryst™ Professional A/V range leverages our enhanced video and control capabilities and offers signal management and system control components to build a multitude of flexible integrated solutions for all home and professional audio/video-related applications. Our ATEN SOHO/SMB solutions invite you to experience the very latest standards in USB connectivity, mobility and speed while embracing the next generation of 4K-enabled workstation solutions. Finally, our ATEN NRGence™ Green Energy line of intelligent power solutions offers sensor-enabled energy-saving hardware and software for data centers that provide real-time energy management and performance indicators.

Our 38+ years of excellence in connective technologies means that we are at the forefront of the seamless integration of A/V with IT. Whether it's for a corporate, education, manufacturing, industrial, government, hospitality or retail environment, ATEN shares infinite possibilities through connective technologies. We have 500+ issued international patents and global R&D teams that produce a constant stream of innovative solutions, resulting in a comprehensive portfolio of products available worldwide, all crowned by some of the best technical support and customer service in the industry.

Headquartered in Taiwan, ATEN has grown to include subsidiaries in China, Japan, Korea, Belgium, Australia, the U.S., the U.K., Russia, India, and Turkey – with R&D centers in Taiwan, China, and Canada.

Our Core Values

Integrity
with pragmatism as our philosophy

Ambition
with optimism as our attitude

Caring
with respect as our spirit

Novelty
with added-value as our achievement

Company Profile

Global Sales and Service Network

ATEN has built a global network of sales and engineering professionals to provide our customers with fast, efficient and comprehensive service. Our distribution channels and partners extend worldwide to more than 100 countries.

ATEN eNews

ATEN eNews is a monthly publication featuring the latest ATEN product developments, marketing and promotional resources, and corporate activities.

ATEN eService

ATEN eService is a web portal which provides several ATEN online services, including technical support, product registration, and partner services. All services can be accessed with a single ID and password.

ATEN Partner Center

Authorized distributors can access the ATEN Partner Center to get the latest marketing materials, sales tools, technical documents, product certifications and more. Registered partners receive a monthly newsletter to stay up-to-date with ATEN's latest product news and events. ATEN also provides integrated marketing programs and promotions to assist partners in promoting ATEN products and services.

ATEN NRGence™ Energy Intelligence PDUs

At ATEN, we are committed to offering smart energy solutions for data centers. The NRGence™ Energy Intelligence solutions begin with a wide range of eco PDUs, developed to support ISO50001, that take intelligence to the next level by providing real-time energy management, control and energy-saving efficiency by allowing you to easily upgrade IT resources quickly and cost effectively. With long-term development in the data center solutions sector, ATEN's Energy Intelligence PDUs have been adopted in various industries all over the world, including Education, Government, Transportation, Enterprise and medium-sized businesses

Featured Advantages of ATEN Energy Solutions

- **Remote Power Outlet Control**

ATEN eco PDUs allow administrators to remotely control the power of any server in a data center via network protocols including TCP/IP, UDP, HTTP, HTTPS, SSL, SMTP, DHCP, NTP, DNS, auto sense, Ping and Telnet. Administrators can remotely access any individual outlet and outlet groups to manage power (On/Off, Power Cycle) through an easy-to-use web interface.

- **Real-Time Monitoring**

Using ATEN's eco Sensors Energy Management Software, administrators can remotely monitor the current, voltage, kWh, power consumption and circuit breaker status of all connected devices in real-time. In addition, the software can track the temperature and humidity via sensors connected to the PDU and provides a complete comprehensive report of all the data being monitored.

- **Proactive Overload Protection (POP)**

ATEN's exclusive POP feature of PE6 / PE8 automatically powers off outlets in the event of a current overload to protect the other connected devices from being shut down unexpectedly.

- **Power Analysis Reports**

ATEN's eco Sensors software provides power analysis for optimizing data center energy management – with reports that include power usage, power load, power cost, CO2 cost, power capacity and trends. Following suggestions generated by the software allows you to optimize energy usage and save energy without harming IT reliability. In addition, it displays essential data center indices including Rack Intake Temperature, Rack Exhaust Temperature, Rack Equipment Temperature Difference, RCI (Rack Cooling Index), RTI (Return Temperature Index), RHI (Rack Humidity Index), RPI (Rack Pressure Index) and RAI (Rack Airflow Index).

- **Advanced Hardware Design**

ATEN offers a wide range of 0U and 1U PDU solutions with advanced hardware designs. In addition to standard and low profile designs, thin form factor design is available for saving more space in the rack to increase airflow, cooling efficiency and easier maintenance.

- **Complete Range of Accessories**

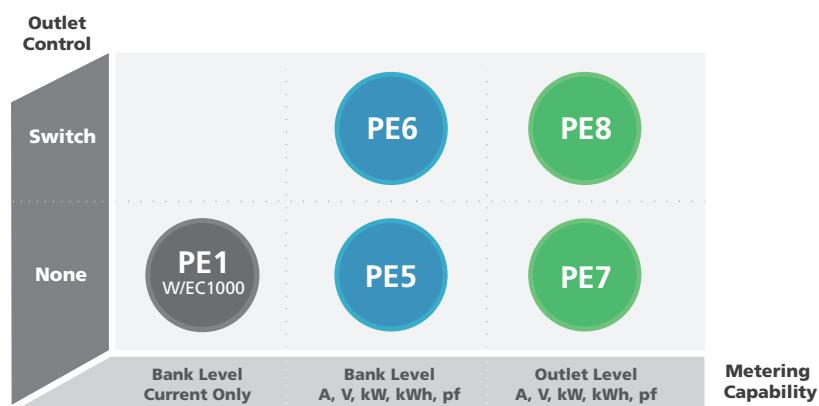

Proper accessories make the PDU installation easier and power management more efficient. In addition to the standard rack mounting kits, ATEN's exclusive cable holders can secure the connection of the power cords with the PDU outlets. ATEN environment sensors allow the real-time monitoring of your data center's temperature, humidity and pressure. Also, the door sensors assist the security management of the data center.

ATEN PDU Family

ATEN's Exclusive POP Provides the Most Secure and Reliable Power Distribution

ATEN's Proactive Overload Protection (POP) empowers users to prioritize their data center's power distribution. When the current overloads, POP will automatically power off outlets to protect IT servers from shutting down unexpectedly. There are 2 POP options available for selection - LIFO Mode and Priority Mode.

LIFO Mode :

The last powered on outlet will automatically power off.

POP Settings

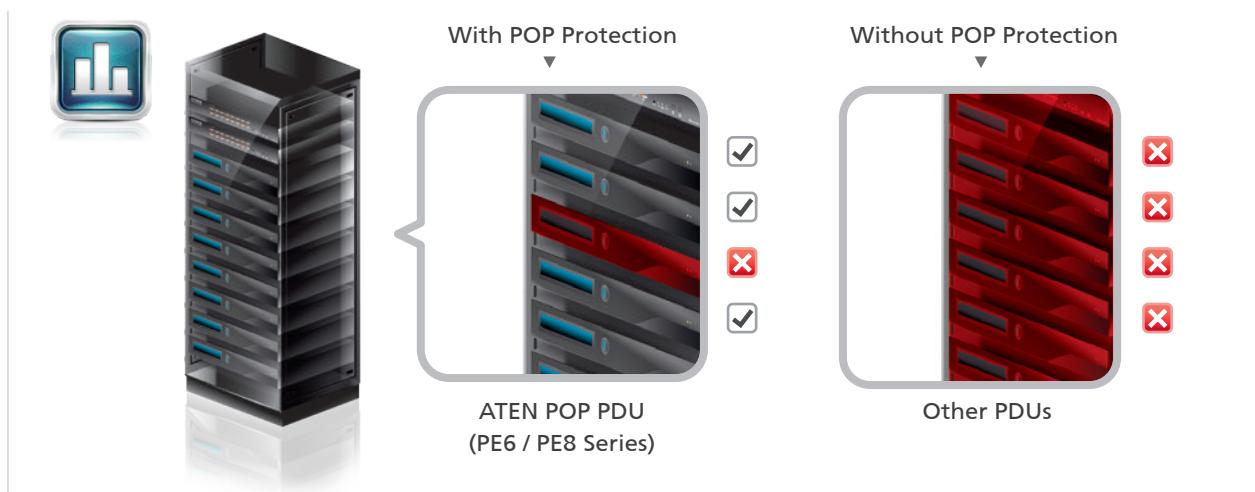

- Enable POP LIFO Mode
- Enable POP Priority Mode

Priority Mode :

Outlets will power off following a pre-defined order. Administrators can set the shutdown priority of each outlet via web browser.

Bank 1 Priority Mode		Bank 2 Priority Mode	
Priority 1	Outlet 9	Priority 1	Outlet 18
Priority 2	Outlet 14	Priority 2	Outlet 22
Priority 3	Outlet 12	Priority 3	Outlet 19
Priority 4	Outlet 11	Priority 4	Outlet 21
Priority 5	Outlet 16	Priority 5	Outlet 20
Priority 6	Outlet 13	Priority 6	Outlet 23
Priority 7	Outlet 10	Priority 7	Outlet 17
Priority 8	Outlet 15	Priority 8	Outlet 24

When a power overloading condition is detected....

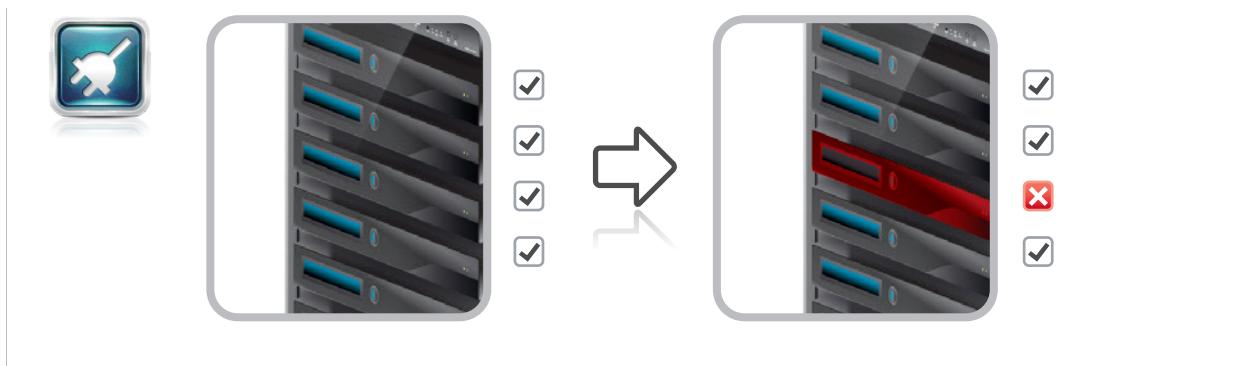

Without ATEN's POP, PDUs will cut off the entire circuit when the power is overloaded, resulting in a sudden shut down of all equipment – which can include lighting, air conditioning and servers.

Note: ATEN's PE8 series support full POP functionality, while the PE6 series only provides Priority Mode.

How can POP protect your IT equipment ?

Scenario : Power Consumption Suddenly Rises and Causes Power Overload

Setting A

- Enable POP LIFO Mode
- Enable POP Priority Mode

The POP feature will automatically cut off the power to the newly inserted server (LIFO Mode), and then switch off servers according to a preselected order (Priority Mode). This ensures other servers continue to work safely and are uninterrupted.

Setting B

- Enable POP LIFO Mode
- Enable POP Priority Mode

The POP feature will instantly cut off power to servers according to the user's predefined order.

Setting C

- Enable POP LIFO Mode
- Enable POP Priority Mode

The POP feature will automatically cut off the newly inserted server, this ensures the whole PDU won't shutdown and critical servers are protected. And if there is not any newly inserted server, then POP will only trip the alarm but won't shut down any outlet.

Scan here to view a video demonstrating ATEN's Energy Intelligence PDUs & exclusive POP feature.

Energy BOX

EC1000

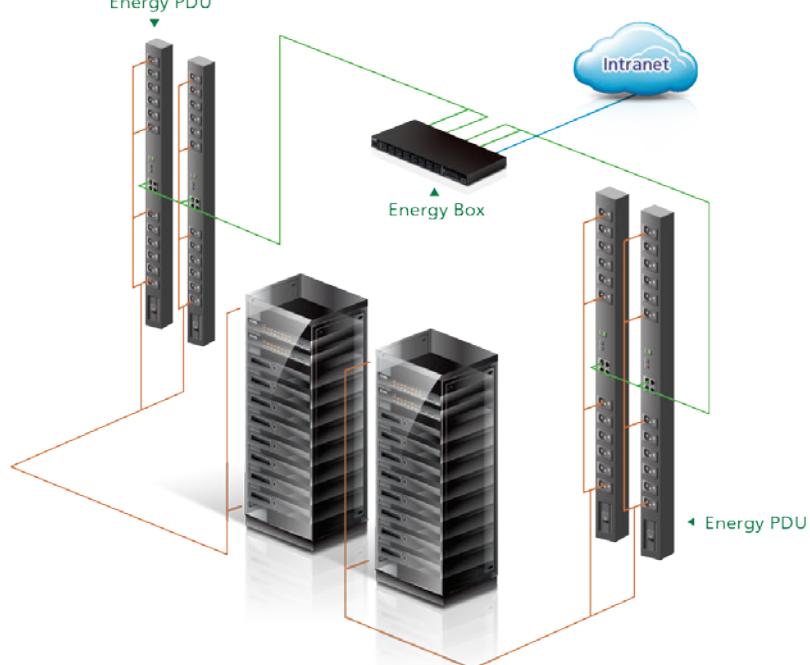

EC1000
• 4 Energy Sensor Ports
• 4 Environmental Sensor Ports

The NRGence™ Energy Box is an intelligent power monitor that works with ATEN Energy PDUs to monitor the electrical current of PDUs, and the temperature, humidity and differential pressure in a room using sensors. The EC1000 is a standalone Over IP monitoring box that can be controlled via Web UI or eco Sensors software. Conveniently installing the Energy Boxes on a rack and connecting them to the Energy PDUs, allows all the power information from the PDUs to be collected and displayed on the Energy Box for easy viewing and monitoring.

- 4 Energy Sensor ports for Energy PDU power monitoring (0A to 32A per port)
- 4 Environmental Sensor ports for temperature, humidity and differential pressure monitoring
- Space saving 0U/1U rack mount design
- Remote real-time electrical current management and monitoring
 - Current threshold level settings
 - Name assignment to individual PDUs
- Extended PDU Management Options
 - Remote management via network with Web Brower, eco Sensors software or 3rd party SNMP manager
- Exceeded threshold alerts via:
 - Local: audio alarm and LED lights
 - Remote: SMTP/SNMP trap/Syslog
- eco Sensors software for complete monitoring to optimize the power efficiency of data centers

Energy PDU

Basic 0U Rack PDU

PE1216 / PE1324

PE1216

- 16 Outlets, 0U
- Power metering and environment monitoring by EC1000 Energy Box

PE1324

- 24 Outlets, 0U
- Power metering and environment monitoring by EC1000 Energy Box

1

The Energy PDU series contains 16/24 AC outlets and is available in various IEC or NEMA socket configurations. It features a space-saving 0U design that allows it to be mounted vertically on the outside of a rack, resulting in a more efficient use of server room space.

- Space saving 0U rack mount design
- IEC or NEMA outlet models
- Real-time PDU current monitoring*

Product Overview (PE1324B / PE1324G)

Product Detail

Outlet IEC320 C13

Power Distribution

- Space saving rack mount design with rear mounting
- IEC or NEMA outlet models
- 3 x 7 segment front panel LED shows Current / IP Address
- Remote users can monitor outlet status via web browser
- Safe shutdown support
- Separate power for the unit and its power outlets – the user interface is still accessible even when an overload trips the circuit breakers

Remote Access

- Remote power control over TCP/IP via built-in 10/100 Ethernet port (PE6 / PE8 only)
- Network Protocols: TCP/IP, PPP, UDP, HTTP, HTTPS, SSL, SMTP, DHCP, NTP, DNS, auto sense, Ping, Telnet
- PDU Power Management software – eco Sensors
- Supports SNMP Manager V1, V2 & V3

Operation

- Remote power control (On, Off, Power Cycle) by individual outlet (PE6 / PE8 only)
- Multiple power control methods – Wake on LAN, System After AC Back, Kill the Power (PE6 / PE8 only)
- Power-on sequencing – set the sequence and time delay for each outlet to power-on equipment in the correct order (PE6 / PE8 only)
- Easy setup and operation via browser-based user interface
- Multibrowser support (IE, Mozilla, Firefox, Chrome, Safari, Opera, Netscape)
- RTC support to keep the clock/timer running without power
- Supports up to 8 user and 1 administrator accounts
- **Proactive Overload Protection (POP)** automatically powers off outlets during current overloads to protect connected devices (PE6 / PE8 only)

PE5108 / PE5208

- Bank level power status measurement

PE6108 / PE6108AV PE6208 / PE6208AV

- Remote power control
- Proactive overload protection
- Bank level power status measurement

PE7108 / PE7208

- Bank and outlet level power status measurement

PE8108 / PE8208

- Remote power control
- Proactive overload protection
- Bank and outlet level power status measurement

Management

- Power status measurement at the bank level (PE5 / PE6), or bank and outlet level (PE7 / PE8 only)
- LED indicators for current and IP address
- Real-time current, voltage and kWh displayed in a browsed-based UI for monitoring
- Environment monitoring via external sensors for rack temperature and humidity readings and alerts
- Current, voltage, power dissipation, energy consumption, temperature and humidity threshold settings
- Supports naming of outlets
- User outlet access rights on an outlet-by-outlet basis
- Event logging and syslog support
- Supports Management Information Base (MIB) files for SNMP
- Upgradeable firmware
- Multilingual support: English, Traditional Chinese, Simplified Chinese, Japanese, German, Italian, Spanish, French, Russian

Security

- Two-level password security
- Security features include password protection and advanced encryption technologies – 128 bit SSL
- Remote authentication support: RADIUS

Note: Product information is subject to change without prior notification.

Specification > PE8208

Function	PE8208A	PE8208B	PE8208G
Electrical			
Nominal Input Voltage	100 – 120 VAC	100 – 240 VAC	100 – 240 VAC
Maximum Input Current	20A Max; 16A(UL de-rated)	20A Max; 16A(UL de-rated)	16A Max
Input Frequency		50-60 Hz	
Input Connection	NEMA 5-20P	NEMA 6-20P	IEC 60320 C20
Input Power	2400 VA(Max); 1920 VA(UL de-rated)	4160 VA(Max); 3328 VA(UL de-rated)	3680 VA(Max)
Outlet Type	Total : 8 x NEMA 5-20R	Total : 7 x IEC320 C13 + 1 x IEC320 C19	Total : 7 x IEC320 C13 + 1 x IEC320 C19
Nominal Output Voltage	100 – 120 VAC	100 – 240 VAC	100 – 240 VAC
Maximum Output Current (Outlet)	NEMA 5-20R: 20A(Max); 16A(UL de-rated)	C13: 15A(Max); 12A(UL de-rated) C19: 20A(Max); 16A(UL de-rated)	C13: 10A(Max) C19: 16A(Max)
Maximum Output Current (Bank)	20A(Max); 16A(UL de-rated)	20A(Max); 16A(UL de-rated)	16A(Max)
Maximum Output Current (Total)	20A(Max); 16A(UL de-rated)	20A(Max); 16A(UL de-rated)	16A(Max)
Breakers	1 x 20A Non-Fuse Breaker	1 x 20A Non-Fuse Breaker	1 x 16A Non-Fuse Breaker
Metering	Outlet level Current, Voltage, VA , PF and KWh Monitoring		
Outlet Switching	Yes		
Environment Sensor Ports	2		
Metering Accuracy	Voltage Range: 100VAC ~ 250VAC +/-1% Power Range: 100W ~ Maximum Capacity +/- 2% Current Range: 0.1A~1A +/- 0.1A, 1A~20A +/-1%		
Physical Properties			
Dimensions (L x W x H)	43.24 x 22.04 x 4.40 cm (17.02 x 8.68 x 1.73 in.)		
Weight	2.84 kg (6.26 lb)		
Power Cord Length	3 m

Outlet IEC320 C19

Front Panel

Sensor Ports

PE5221T / PE5224T / PE5316
PE5324 / PE5324T / PE5342T
• Bank level power status measurement

PE6216 / PE6324 / PE6324L
• Remote power control
• Proactive overload protection
• Bank level power status measurement

PE7216 / PE7324
• Bank and outlet level power status measurement
• Door sensor support

PE8216 / PE8324
• Remote power control
• Proactive overload protection
• Bank and outlet level power status measurement
• Door sensor support

Power Distribution

- Space saving rack mount design with rear mounting
- IEC or NEMA outlet models
- 3 x 7-segment front panel LED shows Current / IP Address / Bank
- Remote users can monitor PDU/Bank status via web browser
- Safe shutdown support
- Separate power for the unit and its power outlets – the user interface is still accessible even when an overload trips the circuit breakers

Remote Access

- Remote power control over TCP/IP via built-in 10/100 Ethernet port (PE6 / PE8 only)
- Network Protocols: TCP/IP, UDP, HTTP, HTTPS, SSL, SMTP, DHCP, NTP, DNS, auto sense, Ping, Telnet
- PDU Power Management software – eco Sensors
- Supports SNMP Manager V1, V2 & V3

Operation

- Remote power control (On, Off, Power Cycle) by individual outlet (PE6 / PE8 only)
- Multiple power control methods – Wake on LAN, System After AC Back, Kill the Power (PE6 / PE8 only)
- Power-on sequencing – set the sequence and time delay for each outlet to power-on equipment in the correct order (PE6 / PE8 only)
- Proactive Overload Protection (POP) automatically powers off outlets during current overloads to protect connected devices (PE6 / PE8 only)
- Easy setup and operation via browser-based interface
- Multibrowser support (IE, Mozilla, Firefox, Chrome, Safari, Opera, Netscape)
- RTC support to keep the clock/timer running without power
- Up to 8 user accounts and 1 administrator account

Note: Product information is subject to change without prior notification.

Management

- Power status measurement at the bank level (PE5 / PE6), or bank and outlet level (PE7 / PE8)
- LED indicators for current and IP address
- Real-time aggregate current, voltage, and power and power dissipation displayed in a browser-based UI for monitoring
- Environment monitoring via external sensors for rack temperature and humidity readings and alerts
- Current, voltage, power dissipation, energy consumption, temperature and humidity threshold settings
- Supports naming of outlets
- Event logging and syslog support
- Supports Management Information Base (MIB) files for SNMP
- Upgradeable firmware
- Supports Door Sensor (PE7 / PE8 only)
- Multilingual support: English, Traditional Chinese, Simplified Chinese, Japanese, German, Italian, Spanish, French, Russian

Security

- Two-level password security
- Security features include password protection advanced encryption technologies – 128 bit SSL
- Remote authentication support: RADIUS

Hardware Design

- Thin form factor offers 8% more space in the rack to increase airflow, cooling efficiency and easier maintenance.

ECO SENSORS

ECO DC

Energy & DCIM Management Software
Energy & DCIM Management Web GUI

What is eco Sensors / eco DC

eco Sensors and eco DC gives you the PC- and Web-based tools to create a fully optimized, energy efficient data center. Both of them combine ATEN's cutting edge eco-technology with an intuitive GUI to deliver the best Data Center Infrastructure Management (DCIM) on the market. ATEN's eco Sensors and eco DC not only give you the means to assess, diagnose and estimate your energy saving potential, they provide advice on the best way to do it.

Overview

ATEN's eco Sensors and eco DC perfectly synergize with NRGence™ Energy Intelligence PDUs to provide the mechanisms to optimize your energy needs. eco Sensors / eco DC and PDU can measure the Dynamic Rack Cooling Index (RCI) and Return Temperature Index (RTI). This allows data centers to analyze the operational efficiency of equipment versus the cost of cooling, in order to better manage power allocation. These indexes have been incorporated into the U.S. Department of Energy DC Pro software tools for data center energy assessments and the Data Center Energy Practitioner program.

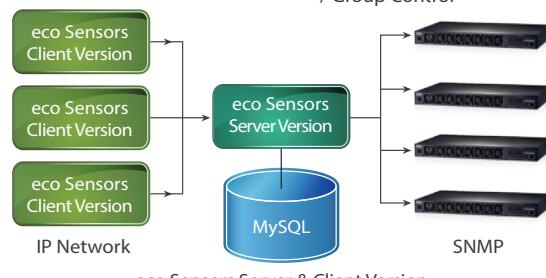

Using ATEN's NRGence™ Energy Intelligence PDU and eco Sensors / eco DC, an administrator's data center is equipped with real time monitoring, measurements and EnPIs analysis that produce reports of power usage, PUE, RCI and RTI to meet the ISO 50001 requirements. With these critical indexes, you can generate customized reports about your data center's energy usage that include energy saving suggestions. Following these suggestions allows you to optimize energy usage and save energy without harming the IT equipment's reliability.

Eco DC is the new Web-based GUI that allows users log in to manage and control PDUs through web browser. No additional install or setup needed. Eco DC can run under any platform and OS. Users can easily manage the power consumption of the data center through intuitive interface and graphics.

ATEN's eco Sensors is available in a Server and Client version. The Server version offers the full functionalities and is capable of managing the PDUs through SNMP and managing client nodes through TCP/IP. This allows multiple users to log in to the server node and manage PDUs in different authorized zones, making distributed PDU management much more efficient under one centralized environment. With the Client version, users can log in to a server node to monitor PDU status and control each outlet on the PDUs. Having the eco Sensors Server and Client version allows data centers to optimize their performance and centralize management with ease.

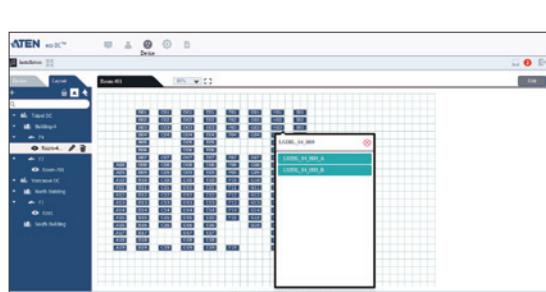

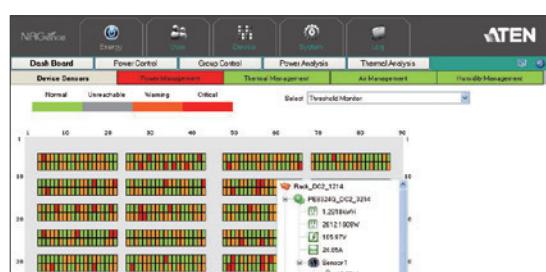

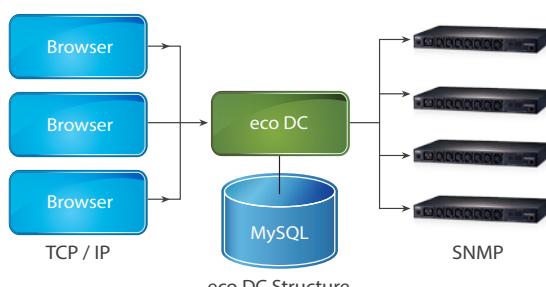

Server Version

- Offers full functionalities of eco Sensors
- Manage clients through TCP/IP
- Manage PDUs through SNMP

Client Version

- Users are allowed to log in to the Server version
- Real time functions:
Dashboard / Power Control / Group Control

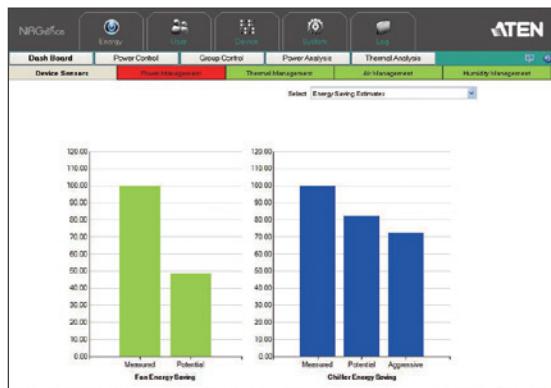

Benefits of eco Sensors / eco DC

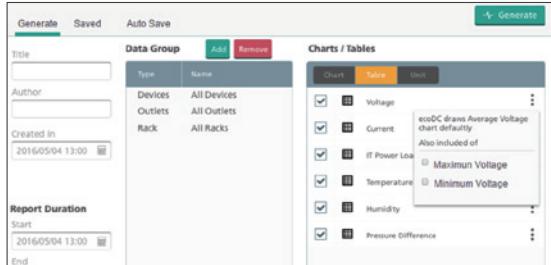

Power Measurement and Scheduling by Zone
 eco Sensors and eco DC allow you to group racks in up to 128 zones and define specific areas that you wish to get readings for. Administrators can schedule power on & off by zone and monitor real-time stats with data such as peak and average power usage per zone.

Power Analysis Report

eco Sensors and eco DC offer comprehensive power analysis reports which can be segmented by departments and locations. Both display trending charts in real-time or according to the day, month, year, or grasp the power consumption needs of each season. By knowing the actual power consumption trends with easy to read charts, you can allocate energy resources and prevent wasted power capacity.

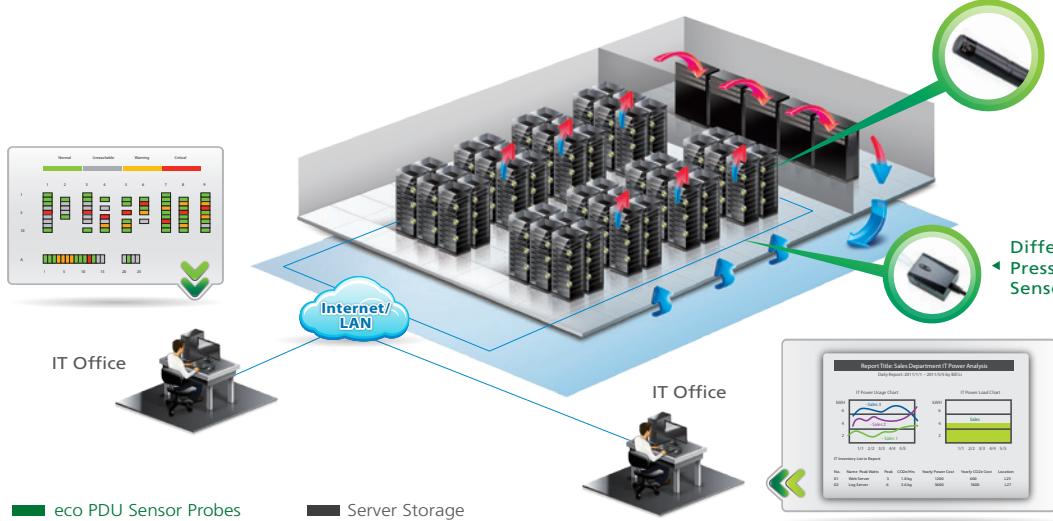

eco Sensors: Energy Saving Estimates

eco DC: Energy Report

Setup >

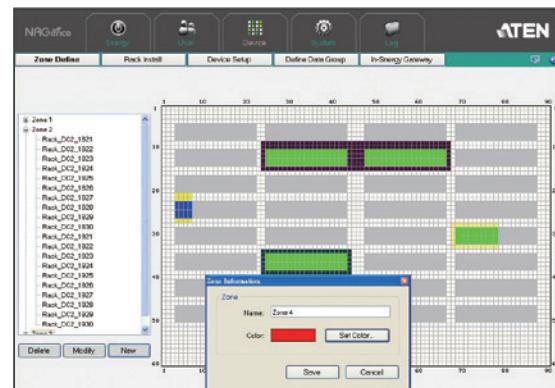

Optimum Data Center Energy Management

When used in conjunction with Sensor-enabled eco PDUs, eco Sensors and eco DC provide administrators with a real-time Rack Cooling Index® and dynamic power analysis to protect IT equipment from excess heat or insufficient power capacity.

Fan Energy Saving & Chiller Energy Saving

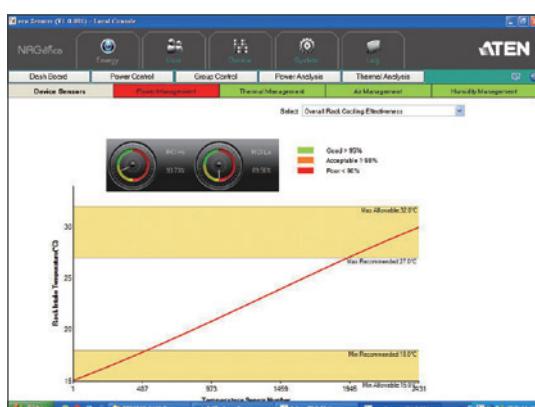

eco Sensors and eco DC provide real-time power measurements and environmental monitoring of a data center from a variety of locations including: at the zone, rack, device or outlet level. By generating customized reports about your data center's status, administrators can evaluate the Fan Energy Saving & Chiller Energy Saving potential. With this information, administrators can quickly analyze and confirm how long it will take to recover the cost of investing new energy resources, and confirm the return on investment.

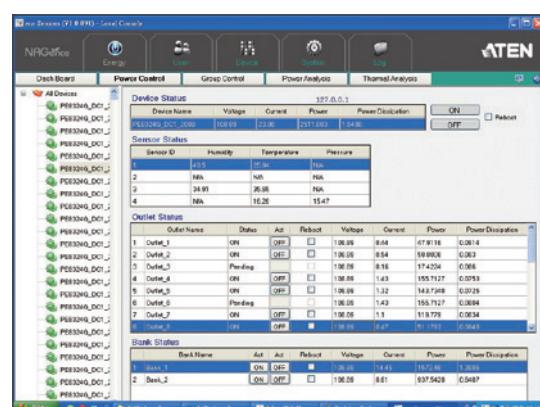

Features of eco Sensors and eco DC

- Automatic discovery of all PE devices within the same intranet
- Remote real-time power measurement and monitoring
 - PDU level current / voltage / power dissipation / power consumption
 - Outlet ON / OFF / Recycle status
- Second window to monitor a data center's PUE, RTI, RCI, Power, Carbon Footprint and rack status
- Remote real-time power outlet management*
 - Power outlet ON / OFF / Cycle switching by outlet or user-defined group
 - Power outlet ON / OFF / Cycle switching with pre-defined schedule
 - User-defined outlet level delays for sequential power up
 - Current / Voltage / Power Dissipation / Power Consumption threshold level settings
 - User access assignment for every outlet
 - Name assignment to individual outlets
- Remote real-time environment sensor monitoring
 - Temperature / Temperature + Humidity / Temperature + Differential Pressure readings
 - Temperature and Humidity threshold level settings

- Plotting / Monitoring of all PE devices
 - Add data center server racks
 - Add PE devices for each server rack
 - Manage device/device outlet status for each plot
- Offers essential data center indices including Rack Intake Temperature, Rack Exhaust Temperature, Rack Equipment Temperature Difference, RCI (Rack Cooling Index), RTI (Return Temperature Index), RHI (Rack Humidity Index), RPI (Rack Pressure Index), RAI (Rack Airflow Index)
- Power analysis report for optimizing data center energy management – including power usage, power load, power cost, CO₂ cost, power capacity and trends
- Exceed threshold alert through SMTP and System log
- 1024 line event log
- System log provision
- Two-level password security
- Strong security features include password protection and advanced encryption technologies – 128 bit SSL

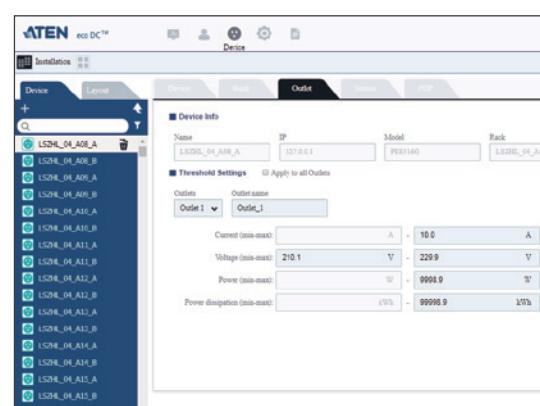

eco Sensors: Overall Rack Cooling Effectiveness

eco Sensors: Power Control

eco DC: Overall Rack Cooling Effectiveness

eco DC: Power Control

* Not all functions are supported by all eco PDU PE models. Please visit www.aten.com for more details.

Functions

			eco Sensors		eco DC
			Server Version	Client Version	
Energy	Dash Board	Real-time monitor of power usage, temperature and humidity	•	•	•
	Power Control	Monitor PDU status and control power outlets	•	•	•
	Group Control	Control power outlet by group	•	•	•
	Power Analysis	Power usage analysis by hour, day, month or quarter year	•	N/A	•
	Thermal Analysis	Thermal analysis by hour, day, month or quarter year	•	N/A	•

ATEN Racks are designed for mounting standard 19" rack-mount equipment – servers, routers, UPS systems, switches, audio/video devices – regardless of brand. All racks provide straightforward equipment organization, excellent security and simple cable management while enabling optimum airflow. There are two series available: The RE Series is perfect for advanced high-density server and networking applications, such as demanding data center environments, while the RS Series provides standard features for a more cost-effective rack solution.

RE Series

Massive Ventilation Rate

Perforated doors for massive front-to-rear airflow provide a ventilation rate up to 78%.

Heavy Loading Capacity

Static loading capacity up to 1500KG (without leveling feet and castors)

Easy Maintenance

Horizontally divided side panels provide easy access and convenient post-installation maintenance.

Optimized for Cable Management

Best design for cable management with large cable access slots and cable management rails.

RS Series

High Ventilation Hexagonal Perforation

Hexagonal perforated front and back doors provide higher tensile strength than round holes while ensuring efficient airflow and optimized ventilation

More Space for Cable Management

Vertical cable management rail design in 800mm wide rack provides more space for network cable management

High Loading Capacity

Static loading capacity up to 800KG

5

Perforated single front door provides massive ventilation 78%.

The heavy duty castors support a rolling load capacity of 1000KG, allowing racks to be pre-configured and rolled to the final installation location.

The vertical rails can be adjusted in quarter-inch (6.4mm) increments covering any mounting requirements for IT equipment.U positions are numbered for rapid installation of equipment.

Specifications
